AX8 Whitepaper

Version 5.7 | October 26, 2026
KIOZO Holding LLC, Wyoming

AX8 connects funded advertising engagement with token rewards, eligible ecosystem purchases and personal-wallet transfers. Rewards are paid from company-held AX8. The company created AX8 and funded its original supply and initial liquidity with company capital and advertising revenue; part of that advertising revenue was also used to acquire AX8 on the market. Company policy allocates 20% of advertising fees to acquiring AX8 for advertising rewards as campaigns grow. Token balances are dated snapshots. This document is not an independent financial, code or security audit.

VIVEX Social expands qualifying AX8 participation to eligible content creation and viewing. The October 18, 2026 snapshot records 35 billion AX8 in a Streamflow treasury lock, approximately 70% of total supply. Blockchain figures in this revision retain that historical verification date; no new on-chain verification is asserted.

1. Purpose and operating companies

AX8 is a transferable Solana SPL token. The AX8 project is owned by Kiozo Holding LLC, a Wyoming limited liability company. Kiozo Holding LLC is the parent company of AVRIO ONE, Inc. and VIVEX EVENT, Inc. It supports qualifying rewards and eligible purchases across the AVRIO ONE and VIVEX EVENT ecosystem.

AVRIO ONE, Inc. operates avriokiosk.com. VIVEX EVENT, Inc. operates vivexapp.com. Company websites are avrioone.com and vivexevent.com. Each platform’s terms govern its accounts, offers, balances and transactions.

The apps do not sell AX8 to users or exchange their AX8 for cash. Holding AX8 alone gives no entitlement to interest, equity, dividends, revenue sharing or additional rewards. This description does not determine the token’s legal classification.

2. Qualifying participation

AVRIO’s reward terms cover sponsored and provider videos, kiosk engagement, referrals, sponsor follows, missions and streaks. VIVEX’s terms also describe paid-ticket rewards, free-event check-ins, reviewed social posts and selected Spark activities.

VIVEX Social offers AX8 earning opportunities for eligible posts, photos, videos, content viewing and selected social engagement activities. Selected photos and videos may offer special double AX8 rewards under the applicable offer. Not every post, view or interaction earns a reward.

Rewards depend on the specific activity and offer. Age, location, daily limits, anti-abuse checks and review can affect eligibility. Pending and released balances are different. Current terms describe review usually within 48 hours where applicable.

Both apps’ terms limit the full sponsored-video reward to once per campaign across the two apps, with smaller eligible replay rewards. AVRIO and VIVEX operate separate referral programs; eligibility and amounts follow the relevant app’s current offer and reward terms.

3. Two rates determine token rewards

Advertising and sponsorship payments fund eligible engagement rewards. The campaign’s funding and rules determine its payout per qualifying view or click; there is no fixed universal reward. The AX8 market price separately determines how many tokens represent that payout.

Campaign payout: the reward assigned to the qualifying activity.
Token conversion: the applicable AX8 price when the reward is credited.
AX8 credited = dollar-denominated reward ÷ AX8 price in dollars.

Advertising illustration only: a $0.06 reward at $0.00003 per AX8 equals 2,000 AX8. These are not current or promised rates. A different payout or token price changes the amount.

Reward token quantities are fixed when credited, rounded to the nearest whole AX8 with a minimum of one AX8 for an eligible reward. Pricing uses GeckoTerminal, then DexScreener, then an internal feed updated every ten minutes. Price-validation controls reject zero prices, prices of $1 or more, and fivefold jumps; a price older than six hours prevents crediting and permits a retry.

A fallback price may be cached rather than a current executable market quote. The applicable offer and app reward terms describe eligibility and reward rules. The pricing controls described above govern reward crediting. A dollar-denominated reward does not fix AX8's future dollar value.

4. Advertising-funded reward treasury

Advertisers pay for campaigns delivered through AVRIO and VIVEX. AX8 was created by the company and funded with company capital and advertising revenue, including market purchases of AX8 made with advertising revenue. Rewards are distributed from this company-held AX8 through the shared app payout wallet identified in Section 9. Company policy allocates 20% of advertising fees to acquiring AX8 through external markets for advertising rewards; future purchases and their receiving wallet will be listed in the treasury disclosures as they occur.

Each campaign defines its qualifying views or clicks, reward budget and participation limits. Without a qualifying funded advertisement, no reward is earned from that advertisement. Referrals and other promotional rewards follow their own offer-specific eligibility and funding rules.

A transfer payout delivers the user's earned AX8 quantity from the app payout wallet to a compatible personal wallet. It reduces the payout wallet's AX8 balance. SOL pays the network transaction fee; a separate dollar payment is not required to transfer tokens. The apps do not exchange AX8 for cash.

Tokens acquired for reward distribution are token reserves, not cash deposits. Their displayed dollar value changes with market prices and does not establish a fixed-value reserve or guaranteed payout in dollars. A user's later external sale is separate from the app's token delivery.

The company plans to establish cash reserves for settlement of eligible ecosystem purchases made with AX8. No segregated cash reserve account or verified reserve coverage is asserted here. Purchase settlement is distinct from personal-wallet transfers and does not create a general cash-redemption right.

Market acquisitions are for reward funding, not guaranteed price support. Third-party wallets and trading services, including Phantom, are not AX8 issuers or project endorsers.

5. Spending AX8

VIVEX terms allow AX8 for tickets and memberships where offered; its membership screen offers prepaid AX8 periods. AVRIO terms allow AX8 for bookings where offered. AX8 is accepted for eligible purchases across AVRIO and VIVEX websites and apps, subject to the applicable offer and terms. This acceptance policy includes website development and signage orders. Adding a "Pay with AX8" option to avrioone.com for those orders is in progress; the acceptance policy does not mean that every website already has a completed automated checkout. The kiosk affiliate leasing and advertising program described in Section 12 uses cash, not AX8; it is separate from reward-token use.

The participating offer must show the AX8 amount and applicable conversion rate before confirmation. Acceptance, availability and refunds follow the operator’s terms. Not every event, provider or service accepts AX8.

AX8 resembles rewards points in how people earn and spend it, but is a transferable blockchain token with a changing market price. It is not a fixed-value voucher or ordinary closed loyalty points.

6. ARIA, VIVEX Social and affiliate discovery

ARIA connects discovery and services across the apps. AVRIO presents City Concierge, talent discovery and advertising assistance. VIVEX presents event and venue recommendations, AVRIO staffing connections and Elite sponsorship matching for eligible events at least 60 days away.

AVRIO lists independent providers such as models, photographers, DJs, bartenders, security and catering businesses. Listing approval is not a performance guarantee; availability varies by location and category.

VIVEX SOCIAL - CREATE. WATCH. EARN AX8.

VIVEX Social connects content creation, entertainment, event discovery, and digital rewards. Users can create profiles and publish posts, photos, videos, music and polls, interact with others, and tag events to connect readers to event pages and ticket links. ARIA provides post-writing assistance.

Create & Earn: Publish eligible posts, photos, and videos to qualify for AX8 rewards.

Watch & Earn: Discover and watch eligible content to earn AX8.

Double Rewards: Selected photos and videos offer special double AX8 rewards.

Discover & Connect: Explore creators, events, concerts, sports, and experiences through the VIVEX ecosystem.

VIVEX Social gives users new ways to participate in the AX8 ecosystem through qualifying social engagement. Rewards are subject to eligibility, review, campaign rules, anti-abuse controls, and applicable platform terms. Posting, viewing, interacting or linking an event does not automatically guarantee a reward, commission or ticket sale.

Affiliate ticket and experience services.

VIVEX reports affiliate partnerships with Ticketmaster, TicketNetwork and Viator for event and experience discovery, including concerts, sporting events, entertainment, attractions, activities and experiences. Whitepaper v5.6 also referenced StubHub; its current status has not been reconfirmed for this revision.

Ticket and experience listings can direct users through affiliate links to the relevant provider to book or purchase. Eligible purchases attributed to VIVEX may generate affiliate revenue for the company. Customers making eligible purchases through VIVEX may also qualify for AX8 rewards under the applicable offer and reward terms. Affiliate compensation rates and private commercial terms are not disclosed.

Availability, pricing, checkout, cancellations and refunds follow the provider’s terms. These affiliate relationships do not mean that providers endorse AX8, accept AX8 at their own checkouts or award AX8 on every purchase. Any AX8 reward must be expressly offered by AVRIO or VIVEX under its applicable rules; provider checkout is separate from the apps’ AX8 reward programs.

AI answers can be inaccurate or outdated. Plan access, sponsorship approval, purchases and rewards remain subject to platform rules. A listed capability does not establish guaranteed fulfillment or complete automation.

7. App balances and wallet transfers

An in-app AX8 balance is an operator-maintained record. Tokens become controlled by a user's personal wallet only after an approved on-chain transfer. Users can request transfers of released AX8 at any time, with no minimum under current terms.

Transfers require approval and are usually processed within 48 hours. The requested amount is deducted when submitted. Rejected requests return to the balance, and the apps state that they pay the network fee. Sent transfers are final.

The user controls the keys to their external wallet. Apps do not exchange AX8 for cash. Any third-party sale is separate and depends on liquidity, fees and service availability.

Current deletion terms provide claim windows for released balances, rewards approved later and rejected transfers. Read the relevant app's reward terms before deleting an account.

8. Token identity and permissions

Network / standard	Solana mainnet / SPL Token
Symbol / decimals	AX8 / 6
Official mint	`3yX3teNoUtPXPMFH5XXTChw9LNajsYmLg47nGAgNgXTY`
Supply checked October 18, 2026	49,999,999,837.818467 AX8
Authorities checked October 18, 2026	Mint and freeze disabled
Metadata	Not independently revalidated in this update

The mint, supply, decimals, disabled mint/freeze authorities, listed token-account balances and Streamflow lock account were checked directly using finalized Solana RPC responses on October 18, 2026 (slot 458564158). These checks are not a security audit. Disabled mint authority prevents further issuance under this mint; a replacement token would have a separate identity.

Inspect AX8 on Solscan . Verify the address rather than relying on a name or logo.

Verification carry-forward: The figures and permission checks above are preserved from v5.6. This v5.7 business-content revision does not represent a fresh blockchain or metadata check.

9. Distribution, custody and liquidity

The following snapshot was checked on October 18, 2026 using finalized Solana RPC data (slot 458564158). Wallet roles are identified by the company. Public data verifies account balances and account owners; it does not audit corporate title, hardware custody or signing controls. Balances can change after this snapshot.

Role and public addresses	AX8 balance

Streamflow locked treasury
`Lock account: A1pdxcXLDUNaxrmJTQkBUCRENKZjBuzaHKFSxnaUKwwc`
`Escrow token account: 3WsRNWPoDSBTZtKj2eXhXQ2DbBkMm4z1qv3hKHebmjqm`
	35,000,000,000

Cold treasury (company-reported Trezor custody)
`Wallet: CJhwhdGPb8hXbJPTT7jgXsFSmmw72sv7u3LyJp3DFa3J`
`AX8 token account: 4Yo6sPcTbw2wQyzoRVg6wYuxpGgDp6DYXPFh1cZUF2j9`
	13,113,133,527.921514

Company operational reward reserve

	901,766,422.584667

Shared app payout wallet (reward delivery)
`Wallet: D3vNUT4EDpB7RwdinFpYpYxHMpFzjbAVLT7b1sYwXW8m`
`AX8 token account: BdvJXWCzywSBxyDEiteA3TyxzvC3nDuRghczj9tG8ArQ`
	1,841,362.165015

Total supply	49,999,999,837.818467

Fixed treasury lock. The 35 billion AX8 escrow balance represents approximately 70% of total supply. The Streamflow account specifies a single full release on October 28, 2027 at 00:00 Pacific time (UTC-7; 07:00 UTC), rather than monthly or gradual releases. Sender and recipient cancellation and transfer permissions are disabled in the checked lock account. The designated recipient is the company operational wallet listed above. Withdrawn principal was zero at the snapshot.

View the Streamflow lock and release schedule. A token lock restricts access under its program rules; it does not remove market, custody or smart-contract risk. At release, the recipient can claim the unlocked tokens.

Lock service fee. The Streamflow account records 175,000,000 AX8 in service fees collected, equal to 0.5% of the 35 billion AX8 locked principal. The escrow principal remains 35 billion AX8. This fee is separate from the company’s reward reserve and from SOL network fees; it is not an additional locked balance.

This disclosure records the lock fee; it does not establish a subsequent sale of fee tokens or attribute market-price movements to Streamflow. No such causal conclusion is made in this revision.

The approximately 901.77 million AX8 operational reserve remains available for company reward funding and related token operations. SOL is held separately to pay Solana network transaction fees. The shared app payout wallet delivers approved rewards for AVRIO ONE and VIVEX EVENT. The approximately 13.11 billion AX8 cold treasury remains outside this Streamflow lock. Hardware custody itself is not a time lock, and no fixed release schedule for the unlocked reserves is committed here.

Balances outside the identified treasury and escrow accounts are not automatically circulating supply; they may include pool reserves, service-fee holdings and other holders. Moving assets between company accounts does not create independent ownership. The lock changes access to treasury tokens but does not guarantee removal of concentration warnings or any particular RugCheck rating.

Liquidity is separate. Locking AX8 treasury tokens is distinct from locking liquidity-provider (LP) positions. This update does not assert a current locked-LP percentage. A third-party report retrieved October 6, 2026 identified a Raydium AX8/USDC pool with approximately $21,194 combined liquidity and 91 holders; those historical figures are not current market data or cash backing for AX8. Concentration and limited liquidity can materially affect price and sale proceeds.

10. Operating and implementation status

Advertising campaigns and ad viewing are active. AVRIO and VIVEX have processed AX8 reward transfers to users' personal wallets. Transfers are sent from the company's designated app payout wallet identified in Section 9. This whitepaper does not publish individual users' identities or highlight specific recipient transactions. Solana wallet addresses and transactions remain publicly visible on-chain. Both apps remain in early access, with a January 8, 2027 public launch described in their profiles.

AX8 acceptance is company policy across AVRIO and VIVEX websites and apps for eligible purchases. The avrioone.com "Pay with AX8" option for website and signage orders is being implemented; the acceptance policy does not establish that all checkout routes are automated.

VIVEX reports that VIVEX Social is available in early access with profiles, content posting, interactions and event-linked ticket discovery. Its expanded reward opportunities cover eligible posts, photos, videos and viewing, with special double AX8 rewards for selected photos and videos under the applicable offer. These are company-reported business capabilities, not independently audited engagement or payment statistics.

VIVEX reports Ticketmaster, TicketNetwork and Viator affiliate integrations for tickets and experiences. Affiliate availability and social reward eligibility vary by offer. External provider checkout remains separate, and a visible ticket link does not establish an AX8-enabled external checkout. StubHub's current status remains to be confirmed.

International kiosk expansion is planned. Map markers alone do not establish installed or operating kiosks. Availability and deployment counts depend on actual installations. No live EV-charging integration is asserted.

No current Phantom verification badge is asserted. Recognition is determined by the relevant data provider or platform, not by publication of this paper. Verification identifies a token and is not a guarantee of safety, legality, market value or future availability.

Future transparency dashboard.

A dedicated AX8 Transparency Dashboard on AX8.us is planned. It is intended to distinguish blockchain-verified mint, supply, permissions, holder distribution, treasury balances, Streamflow lock schedule and explorer records from company-reported advertising, campaign, kiosk, ticketing and social activity. Operational figures would be shown only where supporting data is available, with dates and sources. Private affiliate rates and individual social reward dollar amounts would not be published. No completed dashboard or live operational statistics are asserted here.

11. Risks and limitations

• Market price can change sharply or fall to zero; reward calculations do not fix AX8's future value.

• Limited liquidity, fees, price impact or unavailable markets may prevent a sale at a displayed price.

• Concentrated holdings and operator control of unlocked rewards remain material factors. The 35 billion AX8 scheduled release in October 2027 may materially change available supply; locking treasury tokens does not guarantee a safe rating or price stability.

• Streamflow program risk, recipient-key loss and changes in affiliate services can affect access or availability. A treasury lock does not lock all trading liquidity.

• Planned cash settlement reserves are not an existing verified cash backing or a general cash-redemption right.

• Incorrect wallet addresses and lost keys can cause irreversible losses.

• Eligibility checks and approval can delay or prevent rewards or transfers.

• AI answers, feature descriptions and badges do not guarantee safety, availability or performance.

This whitepaper offers no direct token sale, interest program, guaranteed returns or guaranteed price support.

12. Kiosk assets and the separate cash affiliate program

AVRIO ONE owns company kiosk assets. The kiosk network supports location-based advertising, service discovery and eligible AX8 rewards. Physical operating assets belong to the company; AX8 holders do not receive ownership, liens or redemption rights over them.

In a separate kiosk affiliate program, affiliates lease kiosks for one or two years and pay cash. Advertisers also pay cash for advertising under this program. The separate affiliate program provides 20% of the applicable kiosk’s profit, paid in cash under the affiliate agreement, not in AX8.

The separate affiliate agreement governs profit calculations, deductible costs, reporting periods, payment timing, eligibility, responsibilities and geographic availability. The kiosk affiliate profit share is separate from AX8 reward distribution, advertising-funded token acquisitions and cash settlement reserves.

Eligible viewers of qualifying kiosk advertisements may earn AX8 according to each campaign’s rules and reward calculation. Watching an advertisement does not grant kiosk ownership or affiliate profit rights. Holding AX8 does not enroll someone in the cash affiliate program.

International deployments are planned and availability varies by location. Proposed map locations are separate from installed, operating kiosks. No worldwide availability, minimum profit or guaranteed affiliate return is promised.

13. Contacts and applicable terms

AX8: info@ax8.us · +1 (307) 507-2394. Owner: Kiozo Holding LLC, Wyoming.

AVRIO terms · AVRIO reward terms · VIVEX terms · VIVEX reward terms. App-specific terms govern accounts, rewards, purchases and transfers. If this paper and an app’s terms differ, the app’s terms govern app-specific accounts, rewards and transactions.
